

ITAI 10th CRASH DAY

18 June 2026

Upper Heyford, Bicster

Oxfordshire, OX25 5LE

09:00 - 17:00

Join us on 18th June 2026 for the Institute of Accident Investigators 10th crash and reserach day for Forensic Collision Investigators and those in the wider community.

This is a must attend event for all those who are interested in the outcomes of collisions, including:

- Members of the emergency services
- Insurance claim management
- Vehicle examiners
- Designers and users of roadside furniture
- Suppliers of forensic equipment for vehicle and system testing
- Suppliers of Incident scene mapping and vehicle data capture
- Highways management
- Students and members of the motor industry

This event attracts over 600 attendees from the industry. Please ensure you book you place today by registering at

www.itai.org/events

This is a ticked only event - E tickets and vehicle pass must be obtained for entry on the day.

Rules of Attendance

Your ticket will be issued on the understanding that you attend this event at your own risk. The Institute of Traffic Accident Investigators can take no responsibility for any loss or injury to persons or property during the running of the 'crash day'. Your attendance at the events confirms your acceptance of the above and your agreement to follow the instructions of ITAI staff, organisers and council whilst at the event, included but not limited to vehicle parking and driving, routes to be walked and places to stand etc. You will be required to attend the safety briefing at, or shortly after, 9am, at which guidance regarding the day will be

This is a unique day with a marquee of 20+ exhibitors in the field, an onsite lecture series and the spectacle of live crashes. 2026 sees the return of a range of vehicle experiences including:

- Articulated lorries, buses & tipers
- Low type pressure handling
- Incomplete wheel locking
- Critical curves

Crashes will include pedestrian impacts, passenger movement & emergency vehicles.

Our trackway is opened after each crash for participants to see up close the post impact damage and debris field.
